

(My June 2, 2020 response to BOD president after being informed that my letter had been forwarded to ARC chairman for a response ...)

Hi,

I can appreciate your confusion --

>

>

Aside, from interest in our new BOD's take on the HOA rationale behind substantial increases to our live matter content over long-standing DG2000 levels despite predicted water shortages and fire risk for our community,

>

>

I was interested in BOD current awareness regarding ARC strategy potential for perceived, very unnecessary water waste and fire fodder risk.

>

>

(More than one resident cited "ARC-forced overplanting" among reasons for relocating elsewhere after DG2017 was passed.)

>

>

My inputs to our new BOD hoped to increase general HOA awareness, regarding personally observed, ongoing failure for ARC landscape project strategy to enlist the readily available plant growth data deemed useful for supporting minimal irrigation use and reducing fire fodder risk by SCLH residents ....

>

>

-- It should not be necessary, to initiate formal changes to Design Guidelines for correcting perceived 'worksheet data oversight'?

>

>

The ARC landscape project worksheets could be enhanced fairly easily, imho, to take advantage of expected plant growth specifics, facilitating effective and efficient landscape designs while meeting all DG goals.

>

>

>

Addressing these concerns and suggestions with the 2018 ARC team during my own landscape project, fell flat (see web links in BOD letter)

>

-- hence, my "Who is Minding the Store?", elevated query to our new BOD.
